FÜD Contributions

My role in the development of FÜD was primarily a support role. My skillset does not lend well to direct high-level programming, so my contributions included:

- Early Planning Stage
 - Idea Filtering
 - Rooting out poor ideas for implementation and sub-ideas within possible projects. A good amount of my contributions included finding ways that would make implementation and/or design difficult, such as scaling and the availability of supporting languages among our group.
 - Content Creation
 - After we settled on the idea of a cocktail app, a personal hobby of mine is preparing and serving cocktails. As a result, a significant amount of the cocktail recipes that we used were from my personal recipe listings. Furthermore, when there was a need to find images for the cocktails, I supplied those.

- Visual Design Work
 - After arriving at the idea of a cocktail app, I helped the backend team in designing the database and structure it for the content we had gathered previously.
- Design & Implementation Stage
 - Front End Visual Design
 - Jasmine Doctolero and I designed the logo and name, as well as the overall color scheme, and I supplied UI designs for the app. The drawings used are included at the end of the document.

As the app continued in development, my usefulness waned since there were more competent programmers who took over in design and implementation.
